

PERIOLASE® MVP-7 INTRODUCTION

Letter For Current Patients Of The Practice

Dear _____:

We are pleased to announce that we have recently completed intensive training in Laser Periodontal Therapy and now offer this treatment using the World's first digital dental laser--the PerioLase® MVP-7. This laser was specifically designed for treating gum (periodontal) disease. This addition makes it possible for us to effectively treat gum disease problems and establish ideal conditions for healing the gums around teeth that have periodontal pockets, right in our office.

The PerioLase® MVP-7 laser now gives us a gentle and effective way to stop the damage being done by the infections in the gums. Patients who have had this form of laser treatment report that they have little or no discomfort after the procedure. We are proud to be among the first of the growing number of dental offices in the country to provide this breakthrough laser treatment to our patients.

With this new treatment capability we are able to safely and effectively treat most periodontal disease. If you are experiencing bleeding gums or have been advised that you have periodontal pockets in excess of 4mm, this procedure may provide you an opportunity to regain better oral health.

Please call our office at _____ for more information about this laser procedure and its applicability to your dental needs. We appreciate the opportunity to provide you with this gentle, effective treatment.

Sincerely,

Bethesda
